

June 15, 2010

12 PM Pacific time

The wait for getting through security was surprisingly short. My plane leaves at 1:33 but I have some time to kill and I decided to grab you and let my surroundings travel through my brain to the reality of your pages. I am very excited to experience Boston. I am interested in ^{the} speed by which people travel. Michigan may very slow compared to California, but will Boston move even faster? ^{away}

Met an elderly Mexican couple and presented my Spanish and also a pediatric cardiologist who recommended UCSF

7:50 PM Chicago

We landed in Chicago and people move at about the speed of San Diego... but ~~that~~ it's the airport!

June 16, 2010

Boston is such an amazing city. The speed, for what it has, is as fast as everywhere else. People seem to have very diverse stories and are very willing to talk. The public transportation is extremely helpful and this sort of system should be used in cities around the world. There are many hospitals scattered around the city and this city is predominantly college-based students. I am taking the B-line to Warren St. to attempt to find Caritas St. Elizabeth hospital and find the front entrance so that Monday will be smooth-sailing.

Visited the hospital by taking Warren but learned a better walk by taking Washington which is much faster. Took D to B to Washington then hospital. Human resource lady was very kind.

June 17, 2010

Going to get on the D-line and head to the convention center and try and find man and woman I met on the plane, ride from Chicago to Boston. I overheard the woman describing her neurology called dystonia so I talked to her. She showed me an email she received from a little girl with the same disease in Brazil. They have involuntary muscle spasms and the only known help is toxins, such as Botox, that temporarily stop the muscles in their feet from twitching. The man on the plane and woman said they were going to be at the convention center to raise awareness about this rare condition. I am going to attempt to find them.

The physical therapy convention was outstanding. So many doctors and therapists dedicated to helping others was humbling. I found a whole neurology booth that emphasized the need to solve each other's "physical" situation by administering drugs and help in my practices. I would describe a physical therapist as those that can help people that have issues with involuntary muscle movements such as dystonia. I then met the people I met from the plane and

They encouraged me to visit a website online and take my gene mapping to specifically dystonia. They reviewed my progress of tracing genes via the amino acids in proteins and perhaps I should look at the problems of toxins for they are predominantly proteins and the body is able to become immune to them. I am going back to visit Charlotte to find my A4 reading but

Lakers won so I was happy but the city of Boston will be sad.

June 18, 2010

Even though it felt sad on the T, there is more conversation than usual. My walking went, like it a loss or win, gives something for people to talk about. Perhaps a missing feeling, or it's just the morning I am heading to the hospital to attempt and fill out all of the paperwork that I am required in human services. Luckily I got the directions and took a practice run through and to the hospital. A girl also showed me a shortcut to the hospital from the B-line.

I stopped into Our Lady's hall and was immediately greeted by the fact that the human services were at lunch so I took a trip to the eighth floor neurological services department and met Marianna McFarwick. She was extremely kind and told me there would be much work and to return on Monday for the first days work. I proceeded back to human services and they were 30 minutes late. I filled out a non-paid application and they went to health services. Presented my list of vaccinations then they sent me back to receive my secretary ID!

June 19, 2010 11:47 AM

Woke up and Charlotte had bought
so much food, the groceries were delivered
to the house which is such an
amazing service. I proceeded to put
away the groceries while Richard sat
at the table watching eating breakfast and watching
television. He then put 13 items away and
said he was going to take a shower.
I ~~proceed~~ naturally began to question his
necessity, the left vegetables for I did
not know their proper place, perhaps subconsciously
feeling Richard, he finished his shower and began
to put away the vegetables but the whole time
spoke about how there were too many.
He commenced to watch the movie *Earl* (yes)
when Richard approached me and ~~started~~ started
with "Did Allison tell you I'm moving out?"
I said no. Then he asked "really?"
He described an apartment he was renting
that was impressive. I implied that I should
not tell Charlotte and he is going to tell her
Monday. I then asked if he could help as he
said yes. We moved the bed and one wooden
storage device that was dark brown and has
drawers and shelves. We removed it via
the basement door and after I returned and
locked the door in the basement, he then asked
if I ~~had~~ have a bathing suit and said,

"There is a swimming pool at the apartment
and you don't mind swimming?" right?
I hesitantly refused to go for I have
my own priorities and he had not
asked me before that moment, he asked
if he was going to tell Charlotte before
Monday and he said "no" so I said
I would only hold my lounge, but not
help any further on the lie, I felt
it was ~~one~~ thing to assume he would tell
Charlotte on his own but it is another
to aid in the treachery.

I understand why his intentions
are now in wanting to ~~withhold~~ withhold
from Aunt Charlotte. He didn't want
to annoy her for she is working all
weekend.

I went to the Park street and looked for
something to do I didn't want to be
at that house and Allison (my cousin)
got my energy up by talking about a
potential party but of course she packed
out, so I commenced along the busy streets
of Boston. Not long after stopping to enjoy my
surroundings, a middle aged African American
attempted to relieve money from me
and I entered the world of quiet lounge
and fast thinking, after presenting myself

As a courteous individual, he joined
 respect and he walked to a heavily
 populated area to continue our interesting
 conversation, but so long after, he revealed
 his mental illness of schizophrenia and we
 shared a hobby of I and I have discussions
 about religion (his being Islam) the racism
 in Massachusetts, the terrible anti gay
 the homophobic man, money, mental illness
 and California. He consistently ~~pleaded~~
 for my money, especially when I did not
 have and I ended with ~~his~~ his necessity to
 leave and find a home and he convinced me
 into leaving and appreciating the house I
 am graciously allowed to reside in, he
 promised his love for me and I, back
 then in the middle of the conversation, he
 showed 1/3 of the pad he was given by
 a caring passerby, it was wonderful.

June 20, 2010

Woke up and felt like doing nothing
 outside of the house, so watched "The
 Untouchables" which is about Al Capone
 and his downfall then organized my
 room and hung all of my dress shirts
 in preparation for tomorrow, my first day
 of work. I decided to go with Richard
 and Allison to Richard's father's house.
 They are great people yet seem to have
 very formal/not exciting conversation and
 lifestyle. They had a very little cousin
 whom I tried to ~~hang~~ swoo and
 she responded very well. I appreciated
 the time and loved the experience.
 I am heading to Allison's boyfriend's
 apartment to watch "The Shining"
 and relax before my step into the
 working world. Jack Nicholson was

Jack Nicholson was outstanding. He showed
 how he could progressively become insane
 before the viewer's eyes. John King is one
 of the greatest horror writers because of his
 details. He adds minute details that all
 add in the end to an extreme climax.

June 21st, 2010

I woke up early and ironed my clothes. I made myself breakfast and parked my bag. I left to the train at 8:20 and read "The Odyssey" while traveling to the St. Elizabeth's hospital. It took almost an hour. I started with my day of work by being late, speaking I with Dr. Van Horne. He was in his office and I walked in and introduced myself. His eyes immediately brightened, he talked at a steady pace and made sure I was keeping up with him. He talked about what I should do, how I should always have something to do for there is a team of students and it will be able to see surgeries. He described the extreme amount of learning required to obtain a M.D. and a Ph.D. He said many people would describe reasons not to go through with the schooling involved with becoming a surgeon but he assured those were only their reasons. He said he does not regret his job any day and it should be self-driven to do what he does. It then was introduced by the program coordinator, Harrison McLinnick. He met with Drs and assistants. He then gave me a tour around the hospital and showed me all the best spots for surgery, eating and drink breaks. It then returned

to the neuro department and started being by the head phone receptionist. But I got long, Dr. Van Horne came to me and told me to follow him. He led me to a group of students dressed like I and 4 doctors that I had already met. Dr. Van Horne said, "I have plenty of people to do that work, you may work with the students. They run on their own and my memory smiled at me. David has worked with computer programming and is a student at UConn along with Alex and Katie, they all willingly accepted me into their group and we started work."

First, it was described what their task is, which is now also done. We have a bunch of statistics on the speech of people with and without Parkinson's disease. We need to put a score on the Parkinson patients speech so as to see if they are progressing or degressing. It took a day but they caught me up. As to that I was given Microsoft Office, 2007 and a project from a doctor. He gave me 2 weeks to create a pamphlet that teaches head trauma patients how they can lose their memory, their words, memory loss, brain impairing memories etc. I felt so proud because he said I'd present it to

the neuro department. We finished off the day and

the interns told me to hang with them at their apartment outside of work. I went home, scanned Aunt Charlotte on her break-up and went to the public library to get a book on programming which I found and started when I get home. ~~When~~

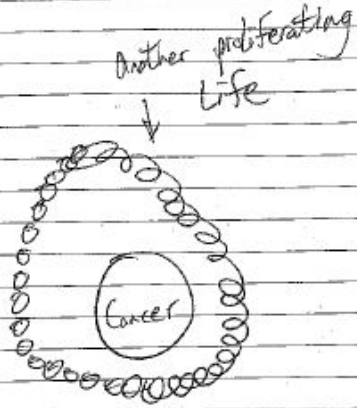

June 22, 2010 1st Surgery

Very excited for my 2nd day of work, but was surprised on a faster route by David and it is working so far.

I came to work today with vigor and excitement. David, my model leader, started ~~the~~ our quest for converting unedited .wps files to edited .wps files. He started out with a paragraph read by my friend Parkinson's and not Parkinson's (Auntie) that contains all 44 phonemes (smallest unit of language) and my job is to edit it down to one specific phrase that we can use at the time interval, and definitely we are measuring. I then was able to see my first surgery. The doctor replaced a face mask for the brain, DBS (Deep Brain Stimulation) I went through the process of scrubbing in and watching what he does. I then saw another patient with Hydrocephalus.

The doctors are so excited about their jobs.

I spent time with the interns after work and then attended an outstanding lecture on how mathematics can cure cancer, made me create a theory on a way to isolate or perhaps kill cancer.

Surround with proliferating life and use up available energy source before cancer expands to the potential energy.

Perhaps before bed, close eyes and write down thoughts because all energy focused on those thoughts

June 23, 2010 Wed

Today was one of the less exciting days. In fact, I was only at the surgery but got did not attend it for it was too early. We came to the realization that we cannot only determine the score of speech based off of the number of changes in decisions but also the intensity of the decisions over time. When the end of the day resulted in "failure" the morale of the team was down and it takes

a great leader to keep everyone's excitement up. As long as we keep in mind that it was a learning experience the time it always a success. It is important to not dwell in the past. I was then given permission to recess brain mis, x-rays, and cat scans.

Today was ~~very~~ a great learning experience.

June 24, 2010 Thurs

Everyone was ~~very~~ short fused in the morning due to the pressure of the day before. To make things worse I wasn't at my normal speed of retention at first. With my age gap and lack of the proper schooling, I have to always be paying attention and writing things down and tapping into all of my knowledge. We then realized another contributing variable that needed to be controlled, the peak time for each sound file. The mood immediately elevated.

When there is a problem that nobody knows how to fix, the entire group is generally agitated and questions everyone else because they think something or someone is the source of error.

Or else just making a rash over generalization.

When my interests moved to their sad study I worked on my post head trauma pamphlet and got it done.

Successful day

June 25, 2010 Friday

casual day because Dr. Yang Horse
is at a different hospital

The weather was nice today and the mood
and energy of people reflected the increase
in sunlight.

it was in work 3 hours before
the other interns and I were able
to get a lot of work done. I ~~was~~
took the day reading about mathematics
and the logic of finding language, physics,
and the representation of any variables.

it also spoke/was consulted by the
Dr. Yang who gave me the project of creating
a take home pamphlet on I feel head
trauma and create a presentation to
present what I learned about head trauma.
Due on Thurs.

it started crashing in energy level at about
3 and didn't get much done for
the last hour and 1/2 of work

still successful/productive

June 26, 2010 Sat.

Helped out Aunt Charlotte with
setting cables and internet and
conditioning. Then just was long and played
Frogger and Duke Gopher all day. Then went
to Allison's friend's house for a party
that was very fun

June 27, 2010 Sun

Went to Matt's Italian
section of Boston and talked with
Aunt Charlotte and Jackie all day.

There is a lot of talking that goes
on here.

A lot of drama

June 28, 2010 Mon

Chit'd files to get, only science to go to find a threshold that we could set the program at so as to have a more accurate reading of a person's speech. We then had a meeting with Dr. Vang Horna where I showed my pamphlet for post head trauma. He approved. He said that he was going to have a surgery tomorrow so I am going to work early so I can attend.

The interns and I went to a consultation on biomechanical engineering that was extremely long until the end where the panel spoke about very interesting topics.

I asked the team why, mathematically, couldn't model and extrapolate risk by taking the impacting variables involved in life, so as to hypothesize how many animals would die with the drug. I guess, companies do take into consideration the variables they understand.

June 29, 2010 Tues.

Woke up early, around 5:30, and made my way to the hospital. I had to be there early for a surgery. I was very excited and met up with the interns to touch base. We got the proper attire on, scrubs, and entered the large room for surgery. I saw many biomedical devices that were designed by companies like Sympetec, Colson, "Proport" and many more. I spoke with a man who worked for Straker and is a specialist on a device that would make up for the removed ligaments and excess disc that the doctor was called in for. The procedure was astonishing. Doctors are very careful when dealing with the body. They manipulate the organs very aggressively, except for the major ones, such as the heart and brain. He cleared out the disc and arrived at the dura, which is the outer layer of the spinal chord. He had to be extremely careful not to damage the chord. The whole procedure took group cooperation and it all flowed so well. It was astounding by how calm everyone was even though they were dealing

with someone's life. I then left
work and met up with my cousin
Jackie to tour Harvard college. The whole
day around Harvard was part of Harvard
app but was a college tour but everyone's
attitude was so busy and negative
that I would not wish to attend Harvard

June 30, 2010 Wed.

Got to work before all the other
interns again so I studied for SAT
again. I finished 3 sections of math.
I then worked on my pamphlet and
preparing for the majority of
the day. I printed about 80 rough
drafts and passed them out in expectation
of suggestions. I finished up the ppt
and was left for the day. Today was
a very successful day and everyone seemed
happy and friendly at work. Happiness
goes in waves. I am going home
to run, study for SAT, and sleep

Always be changing what you're
doing and just be attracted
to it. Assume it is because you
don't know what is going to happen
next. I believe if you are
energetic.

July 1, 2010 Thurs

Today my project was supposed to be done. I could have pulled off the presentation portion but the pamphlet needed rework. Dr. Mike gave me the criticisms and I took them very emotionally because I had ~~not~~ worked so hard on the pamphlet and he wants me to change everything. At first I was ~~so~~ very sad and down on myself but I pulled out of being bad for myself and tried to think of it as a learning experience. I need to outline my projects ~~clearly~~ and present them to my supervisor like ~~before~~ putting too much detail into the work or that for reasons like today, the whole thing may be changed. I also need to prepare for presentations and handouts earlier so that some unknown, variable does not skew my results... or in other words, account for the unknown twist of the variable, ~~handing~~.

After getting past my sorrow, I started work with a renewed vigor and expanded my knowledge of Schwann Cells and NGF receptors. Basically the Schwann cells are able to regenerate axons in the peripheral nervous system. Which is amazing I also worked hard on my presentation and prepared for next week's work because 2/3 of the other interns left for vacation and won't be back for a while. I wonder how smooth work will flow without our fearless intern leader William David Sunday?

July 2, 2010 Fri

Went to work expecting to get alot finished because my bading interns were gone. I started the day by finishing a draft of the pamphlet and showing it to Dr. Mike. He again gave me constructive criticism and sent me off to start again. I then organized all of the sound files on my computer to get ready to be printed and edit the files. My partner (the girl still at work) did not talk much and agreed at about 1 pm we would leave early.

So we both left and I went home feeling happy about the day. I then threw a kick-back with Allison and I sang while one person played guitar and another harmonica. I sang a compilation of "No Woman No Cry" and "Mary Jane Hope" and other songs. The girl started throwing up from what must have been food poisoning and we had to put her to bed.

July 3, 2010 Saturday

The harmonica player (Furter) had left his wallet at the house so he returned in the morning to retrieve it. We exchanged final words and then formulated a plan to head to the beach. We both packed and headed to pick up 2 more guys and head to the beach. I heard some of West Coast music and played many West Coast and on the long trip to the beach I wrote down notes on my phone.

- The artistic side of a left-brained dominant is pure logic.

Just as: poetry etc.

- Some people ^{have} not ~~then~~ developed the ~~simplicity~~ ^{complexity} of others' intentions in social situations.

Songs to listen to:

Celebrity over night
Diamonds and Ducci Man

~~Books to read~~

Books to read: No country for old men
there will be blood?
the road

Movies:
Fargo

if it was to be, incorporate the floor that the people dance on into the song. Perhaps make it of rubber and move to the beat by 3D model of time vs. intensity vs. Frequency.

July 4, 2010 Sun.

Woke up and stretched out my laundry. Then cooked breakfast and started writing in this. ~~It~~ Being far from home really teaches me how to be a man.

I went shopping with Aunt Charlotte and then got plopped off at one of Allison's girlfriends' house to prepare for the fireworks downtown. I met everyone and they tracked downtown. It is so different how raccoons determine the interactions on the train and in town. Raccoons are looked down upon by whites and the blacks don't do anything about it.

We saw amazing fireworks and then had to walk a few blocks to get on the T, because it was packed. I went home and slept.

July 5, 2010 Mon

I spent most of the day with Aunt Charlotte. We went to the museum of fine arts and it was remarkable. My camera died about a quarter of the way through but I was moved by the beauty. We then went shopping for a grill and sawdust and other things. We came home, I grilled, pickled and steak and we went to bed full.

July 6, 2010 Tues

If any going to go whale-watching with Jackie and her stepmom Belinda, I am very excited and I heard the whales may get close to the boat. Should be very exciting.

The whale watching was remarkable! It ran about 1 mile this morning and then got picked up by Jackie and her step-mom Belinda, also Jackie's boyfriend Alan was in the car. We drove about an hour north where it started the novel, the stranger by Albert Camus. We then reached the Lancel site which was a small, beautiful fishing town. It crossed way to museum and the entire trip I was cooking. We took about an hour to get out to the area with whales. Once there, we saw 3 different species, I took pictures of all (had video) and 1 species of dolphin. The trip was astounding and the creatures are truly remarkable. I heard that there is a removal of a spinal tumor tomorrow morning so I am excited.

July 7, 2010 Wed

I woke up at 6:30 AM and left for work at about 7:15. This morning Dr. Van Horne had a spinal surgery on what he thought was a tumor. Turns out it was a cyst filled with CSF. He started by reviewing the MRI's which showed a homogeneous entity, within the Dura (outer layer of spinal chord) that was pushing against the spinal chord. The patient came in saying she had back pain and hyperactivity in her left leg. The doctor went through the spine and arrived at the dura. Peeled back the dura and the arachnoid and found a sac within the arachnoid that was the cause of the problem, up to this point he had thought it was a tumor. In this time, the ~~she~~ almost fainted, I met a new PA who explained a lot of the anatomy to me, and at lunch. The doctor was still working on the body. He is humbling.

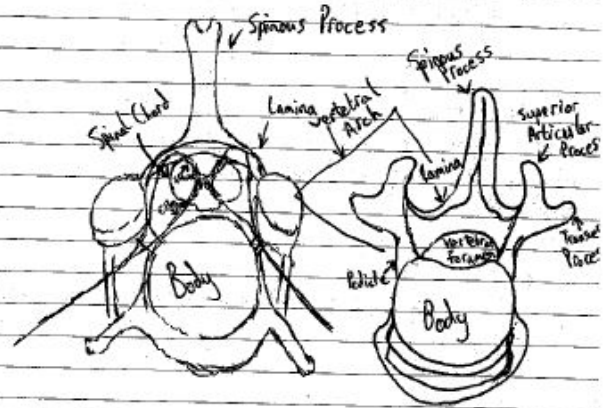

July 8, 2000 Thurs

Great day so far, it turns out that my pamphlet is ready to be printed as a final copy. I am following Dr. Van Home or Kate (NP) to assess patient. It is clinic day and probably the most important day to build rapport with the doctor. I am going to write notes in here.

Took many notes and wrote out some of the flashcards to guide my presentation that I am now going to give next Thursday.

The doctor ended playing us off in a sense but it do not hold him responsible for it for his son. He let me step into him talking with a man who has spinal stenosis around the L4 to L5 area. Kate showed me a comparison between a healthy spine and this patient. He didn't have barely any CSF (cerebral spinal fluid) flow because his spinal canal is so constricted. The ~~neurogenic~~ neurogenic claudication date to radiculopathy. I finished many note cards

Laminectomy: Spinal surgery where the lamina is removed

Spinal Stenosis: Spinal Canal (space in vertebrae that chord passes through) compresses spinal chord and nerves.

With Multiple Sclerosis: Body's immune system attacks the myelin sheath around the axon causing the action potential to move much slower

Embryonic stem cells have been used by replacing the glial cells that have been destroyed and recreating myelin

Researchers at Yale university performed the first central nervous system transplantation to repair the myelin-forming cells in a woman with MS

$$V_{sphere} = \frac{4}{3}\pi r^3$$

Vertices: points where lines meet

If triangle has 2 = sides: isosceles
3 = sides: equilateral

$a^2 + b^2 = c^2$ for right triangles \triangle

Distance Formula $c = \sqrt{a^2 + b^2}$ because:

Lines: parallel to x-axis have zero slope
parallel to y-axis have no slope

Radiculopathy: - Not a condition
(Radix = root) - Description of problem in which one or more nerves are affected and do not work properly

30°-70° = Significant Pain for Gender
Results: Pain, weakness, numbness, difficulty controlling specific muscles
Causes: Lack of blood flow due to inflammation or compression
Test: "Straight Leg Test"

Myelopathy: Any disorder of the spinal cord

Neurogenic Claudication: Painful cramping as a result of an issue with the nerves

Possible Treatment for Spinal Stenosis

You must have one really great wife?

Do not worry someone in medical school

Rehabilitative Anatomy

When did you get married? What was your wedding? Where did you meet your wife?

Create plan for chores and childcare

AT Geometry work

$$\frac{B}{2^{1/2}} \cdot \frac{h}{2} = \frac{Bh}{2} \cdot \frac{1}{2} = \frac{2B^2}{4} = \frac{1}{2} B^2 \cdot \frac{1}{2} = \frac{1}{4} B^2$$

$$80 + 60 = 140$$

$$\frac{140}{40 \times 3} = \frac{140}{120} = \frac{180}{120} = 1.5$$

$$60 + 5 = 65$$

$$600 + 25 + 50 = 675$$

$$25\pi \times 13 = 325\pi$$

$$6.25\pi \times 65 = 40.625\pi$$

$$4 + 2 + 24 = 30$$

$$\pi r^2 = \frac{1}{2} r^2$$

$$4\sqrt{2} \times 5 =$$

July 9, 2010 Fri

There is barely anything for me to do today at work so I am thinking about leaving. The program coordinator is not here, nor the other interns or Dr. Van Horn, I'm going to wait for Mariana though.

Ended ^{up} leaving early, and meeting up with Hunter, an Christian boy who is 18 and going to be a Freshman in College. He is Allison's cousin. We met up with a girl and her boyfriend at a local, small lake where we have played football, and hit ~~some~~ on those Jewish girls from a city that is 30 minutes away.

Hunter and I then threw a small party at my aunt's house where we sang, played guitar, and played harmonica.

July 10, 2010 Sat.

For some reason I slept longer than I have in a while. I woke ~~at~~ at about 11:30. I did some sit-ups and pushups and then ran a little over a mile. I returned back to the house and ~~at~~ the sky began to weep with tremendous force. I felt like grilling chicken as I started 35 coals and I baked with the poor cooking conditions but ended up making a great meal. I then made for hummus with my Aunt out of Garbanzo beans, Chick Peas, and Tahini (sesame paste). I then added garlic powder and I think Basil, it was delicious. I then read a bit of the new novel I am starting, *The Power of Myth* by Campbell. I am now going to Allison's girlfriend's house.

First book of Corinthians:

"When I was a child, I spoke as a child, I understood as a child, I thought as a child; but when I became a ~~man~~, I put away childish things. Mar 1:10-10"

Through my readings of *The Stranger* by Camus and *Four*, I am realizing the significance of myth-type teachings such as the bible.

for they summarize ^{the} ~~every~~ wisdom of life by
going to hypothetical situations to teach
philosophical catch-22's.

Went to Allison's girlfriends and watched
most of her movie. It was funny
as well as a comment story and
it was amazing food. Going back to go
to bed.

July 11, 2010 Sun

I am having one of those days where
I feel the world is revealing itself
to me in mysterious ways. The writer
of the book of Math ~~has~~ discusses "consciousness
and energy in ~~the~~ any effect of your universe
if you dispersed that energy with people
and they haven't been able to grasp my
separate attempt to put words to the matter.
He is able to create a scenario:

How when you enter a cathedral, you can feel
the energy in the cross and the stained
glass.

I am going to start and write productive things
and find a couple core episodes
to then create journals I can consist
update.

Had a great discussion with my father about
Energy and Pink Floyd and sharing our ability
to appreciate the most efficiency of human form.

Hummus: Harbony Beans
Chick Peas
Tahini

Street food: Ruckin Sauskraut Thousand Island
Rye/Beef Rye Corned Beef

Apple Juice Milk Black Pepper
 Eggs Salt Garlic Powder
 Basil Wheat Thins Tuna Fish
 Mayonnaise Marinades

Dent Appliances

Food Processor

The power of myth is an excellent novel. I'd love the wisdom that Joseph Campbell has and I want to contact him.

Look into the Masonic order.

Read Egyptian Lore

Primordial Hitlock

Teia Principis

Chief Seattle from Paladitic Moral order

July 12, 2010 Mon

I woke up a little late and went to work with Aunt Charlotte. I did not watch her surgery because it was vaginal reconstruction so it was given off to Dr. Martin Williams. He is a black man with a son in the NFL. He does general surgery and he had about 6 so I devoted the day to watching him. First of all, the hospital (Carney) was not as strict on hygiene as St. Elizabeth's but it was still very strict. The 1st surgery was a nipple readjustment on a middle aged woman. He ~~put~~ put a dye in the complex tubes that branch off from the nipple (to locate it) and then moved the nipple and pulled it through a new hole and then took out some fat to reshape the breast. A med nurse then walked me around and told me different things about the medical field until the next case. I then saw Dr. Williams remove a port-a-cath from a Kemo patient (what a monumental day) ~~then~~ then ~~the~~ then went to the cafeteria. It had similar food to that of St. Elizabeth's and I sat by myself. An elderly woman then approached and we struck a conversation about Mass and Cali and her psychiatrist. I then saw Dr. Williams remove excess skin that had regrown from an Asian girl's ~~the~~ head. From that point

on it shadowed the Anesthesiologist in
between cases. He was a Polish blonde
man who had a straightforward sense of
humor that made me laugh alot. He showed
me what his job entails and frequently quizzed
me on facts he told me earlier in the day

Such as:

Kushing; or Cushing; or Cooshing is the grandfather
of Neurosurgery ... or ~~maybe it was O'Leary~~

O'Leary helped start John Hopkins ^{it was Kushing}

O'Leary pioneered Modern day ~~and~~ bedside teaching
of Medical students

We saw

We then saw the removal of a girl's gallbladder
through medical instruments I have never seen
before.

I started to think about the fact that I
would not enjoy being the type of surgeon that
Dr. Williams is because of the lack involvement
with the core of a human's existence... the Brain

I realized; opportunity: act is appealing to emotion
day is appealing to reason

I need to Email the teacher that
assigned this book.

I have been using my own myths to try
and convey the energies

I appreciate your appreciation of this
novel

Brownian Ratchets Substantia Nigra

Ask Dr. Van Horne:

The term Nerve Growth Factor
Fibroblast Growth Factor is
so vague for me when I read it.

Do you know how many categories of factors are
involved in ~~specifically~~ ^{specifically} for ~~nerve growth~~ ^{cell growth}

as do we know ~~or~~ is it possible to quantify the
amount of factors involved. I feel like the
starts looking with relativity and randomness

July 17, 2015 Tues Dr. Gutting

- it remembered this and of any in a surgery so at an angle to take notes and explain later
- Lighting System = Berchtold Chromoview
- Lamps = ~~Halos~~ & Solarmax 300 = Head Lighting/Viewer Helios
- Bipolar = Codman
- Are Energized by with "Hair Trigger"
- Have to be aware of reaction after action eg. put tool on ground before clearing wound to catch drip
- Each doctor has their own tools that they can specify to use. Dr. Gutting uses the hair trigger for long surgeries because it keeps the patient warm by filling plastic lining with air molecules. Each Dr. does what they want.

I am so very excited. He has pulled back the skin on the scalp and is about to drill in.

- How do you know when to stop drilling through the skull?

- they are very good with knots and "rope" typer Neuroform

- For under the scalp, used what looked like typical knot used in first step of tying shoes

- then for outer layer, started with a few loops around the precept, and pull other end through middle, then the shoe lacing effect and then end with double loop

Receptor Biology

Do you mind writing a letter of recommendation for college for me?

And, if really want to help out ~~with~~ with research or technology or anything ~~else~~ related to neuroscience with all ~~of~~ colleagues of yours on the west coast.

3 colleges - Department head - 1 program - Financed by

Jefferson's Life:

I really like this college and this program,

I see its funded by this

If you were what would you study that is the new hot technology, surgely techniques, and research.

Today I walked in and asked if I could watch Dr. Gattings Hematoma removal. He asked if I had seen a case before with Dr. Van Horne and then said sure the surgeries was remarkable. I then researched Schwann Cells all day and talked with Dr. Van Horne about Schwann Cells for up to 45 minutes. He is leaving on vacation next week so I am going to ask for a letter of Rec. and advice on college programs.

Undergrad:

1st: Biology, Chem, Phystes, Engl., Calculus (I+II)

2nd: Organic Chem (Phystes), Anatomy + Physiology, Calculus III, IV

Biochemistry

July 19, 2010 Wed

There was a case this morning that consisted of a herniated disc. I went in at about 8:15 AM and was able to take many pictures and videos. After the surgery I researched colleges and programs that I could pursue in my future. The interns and I were then booted from our conference room and I decided to talk with Dr. Dean Horne. He said he would be happy to write me a letter of recommendation. He also advised me to not plan too far ahead and to also have a social life because too much of anything is unhealthy. Also for me to travel the world while we have the chance. I went to the library and researched research studies where they transplanted human cells into the substantia nigra for we need to compile as many studies that have done the procedure that we are trying to do with humans to get the procedure passed by the IRB. I then printed out 12 copies of my pamphlet and got the projector ready for my presentation tomorrow. I need to get up at 6 AM, or make my lunch and clothes tonight.

For me,
 Nowadays people think about concepts and objects that effect their life and about filtering the thought to be able to say it or write it.

~~things~~ The spiritual thinking consists of thoughts of thoughts. Categorizing thoughts, assessing various thoughts and determining the best way to live your life. ~~the most~~ ~~penetrating~~ ~~the~~ ~~par~~ ~~about~~ balancing the 3 ~~the~~ categories of thoughts.

- Thoughts

- Thoughts about thoughts

- The way one conceives a thought

~~If you don't eat with your muscles are~~

all you don't eat with your muscles are pretty similar to what the BSM allows. excessive

if you overeat, you have ~~that~~ ~~much~~ fat.
 if you work out and don't get white, your muscles develop weird.

but the muscles will return to what the BS4 allows if you do not consistently work out

if you work out while eating ^{appropriately} your muscles develop in the most attractive manner

Practice metacognition to live a healthier life.

I have an idea!

Alright, TV distracts from thoughts through sense of sight.

Music distracts from thoughts through sense of smell

Sex, working out, ... distracts through sense of ~~the~~ touch

Create a distractor by use of sense of smell.

Sell packets of different atmospheres

- Beach - Candy Store - Hospital (for me)

- Garden - Thanksgiving - Christmas etc.

thoughts on the devices

Sell one for each smell

smell (fragrant mixture, the interchangeable smell)

comfortable nasal interface

"Mistakes" (But being right before you get there) gives one time to think about how to handle the situation they are in a hurry to get to.

So I ^{gave} ~~put~~ that concept ~~into~~ to my subconscious and didn't worry about it.

~~Until a few days ago, my subconscious~~

The way I think (I presume as a man), involves me taking the issues I have (which may be ~~difficult~~ strange to others) & letting my subconscious work on it. I ~~still~~ never have known why this method has been so productive but it has.

Until a few days ago, my subconscious & proved ~~it~~ its self-worth.

I see three categories of thoughts, at least they incorporate the most amount of sub-categories of thoughts.

So lately I have been fumbling with a compilation of events that are occurring around me and I started to ponder on the concept that one should be able to think positively when they want to, think negatively if they want to, ignore the emotional pressures for a short time if they want to, to move their life forward in the most productive way possible. By focusing all thoughts on the one I ~~may~~ see as most prevalent, at that time.

~~For descriptive purposes, let's call them~~

~~THINGS~~

- Thoughts (feelings, objects, passions, etc)

Take a journal and continuously write the first thing that comes to mind

- Jilted thoughts (~~difficult~~ speech, structure writing)

The way one shapes the thoughts to be easily understood by another

Aristotle's 4 Causes:

Now the third that has revealed itself

- Meta-thoughts (Thinking about thinking)

Assessment of ~~existence~~ thoughts

These are the thoughts that philosophers spend their lifetimes working out.

To interchange between these three categories with ease, one must practice all three continuously

~~Everything is changed~~
Aristotle's 4 Causes

~~What is the purpose? (at the responsible factor)~~
~~What causes the thing to come into existence~~

Take Philosophy:

Research teacher so that it will ~~not~~ look like him even though it is a universal language

Criteria: "Responsible factor"

Since life ~~usually~~ involves change, must find the root of the change to identify any inquiry about the change.

What's described as a cause

Material Cause - The material out of which a thing comes into being and which remains present in

Formal Cause - Form and pattern are a cause

Efficient Cause - ^{maker or mover} eliciting source of change, what produces is the cause of what is changed

- Purpose for the change, root cause, initial issue

As in taking a walk, the act of walking deals with the issue of health. Everything involved with walking will naturally result in an infinite amount of purpose for initiating an act that constitutes ~~with~~ the overall cause of health.

The same thing will be the base of two contraries

Jylogism: "A discourse in which, certain things having been supposed, something different from the things supposed results of necessity because these things are so" (24818-20)

Discourse: Extended verbal expression in speech or writing

A=B
A=C ∴
C=A

Platter than teaching a new set of religion and morals to our children.

It should install pure logic on to children so that they can understand the causes/background of religious thought patterns, social conflicts, politics

~~They will reach their own conclusions that sprang from correct logic~~

They will reach their own conclusions that sprang from correct logic

If everyone starts with some logic, it is pretty universal, many problems were avoided

Daniel Goleman

"Emotional Intelligence"

Schwann Cell

Neurotrophic Factor: Help with growth of neurons

Ruffini Endings: Located in the deep layers of the skin; register mechanical (Mechanoreceptors) deformation in joints; more specifically angle of change.

Periodontal Ligament: Connective tissue fibers that attached tooth to alveolar bone; help tooth withstand compressive forces; sensory innervation so brain can detect and act accordingly

Posterior

Anterior Transfection: Process that a virus does but this is done by humans. Replicate DNA in a cell, then inject into the virus DNA's purpose. Subsequently inducing nucleic acids into cells

The way to track a cell is create an antibody by injecting antigens into a host and then collect the linked antibody, put a "tracker" (color, dye, radioactivity) on the antibody and then put antibody in the place where we want to track the cell.

Pituitary Gland: Pars intermedia

HPTA

Hypothalamic-Pituitary-Adrenal-Axis

Neuroendocrine System

Mets humans apart from most species because we can consciously release chemicals in the body.

July 15, 2010 Thurs

I came into work today very nervous because it is presentation day for my powerpoint. I started out feeling like I didn't have enough information on my project so I hurriedly rushed to the train. One left right before I got there so I started to and then I ~~was~~ realized I was presented an opportunity to think over the wording and ~~research~~ other things to add. I thought about adding a slide for Parkinson's for that is a very prevalent subject and then I thought about talking about my realization in philosophical topics. So I wrote out my thoughts and decided to change the theme to that of ~~wherever~~ The things I gained from my experience in Boston. The doctors all really liked my passage and powerpoint. They decided to print multiple copies of the pamphlet to actually hand out the pamphlet to people who come in with a head trauma. After the presentation Mike Bennett P.A. talked to me about philosophers to read. ~~He~~ I then spent the day reading about philosophers and ontology. Dr. Paul Horne had me to come into his room, next week and give a talk on "complexity" and how he feels the topic would resonate within me. They both said ~~that~~ that only about 10% of the

population are interested in this kind of thinking and implied it should be wary of preacting. Dr. Van Home said he would help me however it is necessary and it am welcome to come back for internships at any time and perhaps something more formal in the future... it feel good.

After practicing with transcendental, only you can you displace yourself into the thought pattern of your choice

Try imagining the atmosphere that it would take to get yourself thinking in the desired manner.

For instance, for me thinking of the beach and sun would make me happy so if think about what thoughts would be like at the beach and they start shifting to ~~the~~ happy thoughts

July 16 2010 Fri

Don't teach unless asked

It is soon going to be the end of your escapade, journal. You have been kind to me, sharing your life in an unconditional manner. Welcoming me my team with open wings.

July 18, 2010 Sun

woke up to Allison telling me that we are going to get picked up by Aunt Charlotte, and then leave to NYC. It commenced to shower. The door to the shower ended up falling off its hinges and I had to put it in place again. We got picked up and started on the road. Allison and Aunt Charlotte were then talking the entire time in the car.

The key to thinking logically is to be always minding the impacting variables.

New York is ~~unrepresentative~~ surprisingly now more and a completely different atmosphere. They are more very fast and are generally accepting of a new personality. It was able to see the state of the Union today full, our lady liberty, the five state buildings, time square, central park, the new architecture and sculptures, and many things not. We ate at Jackie's and I remember because of our the Dean fish. We are now heading back to Boston.

July 19, 2010 Mon

I took today off of work because the doctor is on vacation in Australia. I woke up, having slept in, ~~and~~ to Aunt Charlotte talking loud and getting ready to feel an extremely terrifying dream. Last night. I had been taking some cute girls before bed when my brain began to ~~start~~ start its dream cycle. I remember the first half of the dream being enjoyable and successful but the 2nd half was horrific. I got in a shower. My dad was standing on the kitchen floor while I was on the toilet what being him. He had my shirt off and he seemed to have lost weight. His eyes were all white except for an outline of where his iris and pupil should be. He was happy with me until I pointed out that his eyes looked as if it was rotting and then he started to yell. I then knew it was a dream. So I tried to shake my body out of the dream. Perhaps I could fall out of bed and wake up. It successfully woke up and gave my brain some time to not be so active. Aunt Charlotte then

July 20, 2010 Tues

set up a dentist appointment for me and I got my teeth cleaned. They showed me the best way to brush with braces. My friend Peter came over and we hung out for a bit. I am now at the park; writing and recording book.

Another day of work. I compiled all of the notes I have met here into a spread sheet. I doubled the amount of slides in our group's previous presentation. Dr. Van Home left me a book to read and also bought me a book. I need to write thank you letters to about 30 people and I am going home.

Went to a dance in Cambridge. It was so much fun.

July 21, 2010 Wed

Went to bed the night before very late so getting up
was extremely difficult. I told my program
educator about the dance and the difficulties
involved. She said I didn't even have to go to
the dance and that dances are very important for people
of all ages. She is so understanding and I look up
to her Social Skills. She told me once that
I am a great speaker and I am ever mentally
fit to smile... take a deep breath... and then I
was the next would be say the truth. I wrote
my thank you letter to Dr. Van Horne and worked
some special presentation slides for the interns.
Returned home and started the long process of
packing by getting my clothes cleaned. I gilded chicken
spiced time with my cousin Allison and her
and

July 22, 2010 Thurs

This is going to be my last day in the neurological
surgery department. I have thank you letters for Dr. Van
Horne and Missions. McComick for when they come
in and have checked-in to my phone. I also
wrote off the bonding part. I am reading as much
of the book about complexity that Dr. Van Horne told
me to read before I have to return it to
his office. I am going to write things that interest
me in the book.

Caroline Dimpens proposed known organisms according
to similarities they displayed in systems nature.

Darwin attributed natural selection

Immanuel Kant

Embryology - Cells differentiate (from DNA commands) into
cells we know

(drive for the idiopathic

July 23, 2010 Fri

I am going to really miss Boston. Despite cold like, nice summers, cold water and dry attitudes, the relationships I have established are genuine. I now understand why being overly intimate can be considered an insult. Happiness can be perceived as an attempt to interfere with an interaction. It is known to be momentary, it may not wish to encourage involvement. I expect others to respect my mood by reflecting it. I am thinking illogically, I need to be wary of potential energy so as to not scare away me.

I ended up partying until it was time to leave for the airport. My friend Hunter is so kind; he returned from driving someone else to work me up and take me back to Aunt Charlotte, it honestly felt like there is no one who knows in California that would be patient with me and do the same. I returned to Charlotte's house and laid down for 5 minutes when she started on her typical ranting. So I took a shower and I put my bags in the car. I am happy I packed the bag early as at the morning was earlier, I could up sleeping through the first flight. I am now sitting in Kalamazoo because Detroit is too stormy to allow our plane to land, I thought that I had gotten on the wrong plane and stressed on the outcome of my mistake. Perhaps that is not an anxious mistake that seem so prevalent in the Richards family.

July 24, 2010 Sat

Slept over at Sean's house so woke up in same kind of environment that I have so unfortunately experienced. It was the 2nd to awaken and I made myself fried eggs on 12 grain bread. I then went on a run that was very short because of the rain and lack of running shoes. The previous day I returned to the house and watched Bruce Springsteen concert with our. We then prepped the house for my cousin's 21st birthday and grilled the ribs and chicken legs for the party. I saw a lot of family that I have not seen in a while. Had a great discussion with James about the field of philosophy and I discussed the occurring issue of life being an illusion. He interpreted the topic as similar to how the color green to some may look different than the color green to others. I took the issue as meaning literal, physical.

July 25, 2010 Messy Sun

I woke up early and spoke with Mom about her epileptic seizures in the past and the possible causes. She seems to have abnormal activity in the frontal lobe which ultimately affects her emotions and movement. I thought it is interesting that the seizures are all thought provoked and that she could think her way out of the "trance". I then started thinking how life must be an "illusion" because the mind experiences the physical world and interprets it, and all the interpretations are relative to the beholder. The physical world is actually only an interpretation of stimuli. The physical world and thoughts are one in themselves and the boundary between them are time-space.

I ran and then we went to meet where prayer was discussed; I wrote notes.

I am going to write some essays.

I come from a world of logic. The
movement, the birds chirp the need for
you, and they rise of life ~~will~~ so much of
our country is based on the ~~with~~ a social
interaction will take, and the thought patterns
a child; how be broken down ~~into~~ early
and career, I was ~~the~~ born in the beautiful
state of Michigan. ~~with~~ the dense air some arise
variant landscapes that appeal to so many. My
interior stretched around 10 square miles, and let
points along the diameter did my father house
and from my mother's. They divorced ~~with~~ in my
year of elementary and I am thankful. Both
sought to give their time and energy to my
father and ~~and~~. ~~My~~ One week with one
went, the next with the other ~~my~~ sister ~~was~~
I have a symbiotic relationship. Years in ~~my~~

god-fearing town led to my kindling passion to
my mental and physical energy towards a career
I studied the ~~aspirations~~ ~~and~~ of my father's father.
I school. I believed the path of the right - rising
moment would ~~provide~~ my hunger for success. ~~the~~
opportunity ~~was~~ not ~~until~~ ~~you~~ - that my
be admitted his place to reward father and ~~God~~

never across the country.

I am the offspring of a man
of logic and a woman of the arts.

I am the offspring of two polar opposites.
My father by the strength of a sun and by
its actions off of logic. My mother's actions
coincide with humanistic emotions.
Consequently, My sister and I are a perfect
balance.

Most likely due to the juxtaposition between
Michigan and California that my father
articulated throughout, as my, my manifest
destiny coincided with that of Lewis and Clark
I thought of life after the care of my
parents as a pursuit to reside in the beauty
of California. I experienced frequent visits
to San Diego on a yearly basis, and fell
in love with a ~~stereotypical~~ conventional
of continuous, life-enhancing, sunlight.

July 26, 2010 Mon

I'll visit to an Alzheimer's home with grandma see her brother Bob. He had had a large tumor removed from his sinus cavity and seems him in the state that he was in 14 years ago. He kept his sense of humor but struggled with remembering my memory. He recognized his sister and it's something on my height. We gave our songbooks and listened to his remembrances family in old photos. Upon leaving, a woman thought she was leaving with my grandmother and I. Closing the door on her face was very difficult, especially when she knocked me to let her through.

July 31, 2010 Sat

We are all about to leave for up north, last night my mother and I spoke about relationships and family. I said something that just poured out of my mouth.

It is not the imperfections that one should hate. My love will not with the imperfections for they will not subside.

Learning is a good reflection of moving away from interactive interactions.

Jan 2010

the thing that makes us similar
god is that he is also changing
and limited by its own dimensions. In theory,
it is the dimensions above ours that we are
able to consciously comprehend. One could
argue that the summation of all inflicting dimensions
ergies is god but I would argue that the
realm of dimensions is also being impacted by
a greater variable. I believe our god
is a god because ~~he~~ for ~~prophetic~~
creator may be incomprehensible.

Love thy enemies.

Be it people and things that negatively
impact thoughts.

Such as country music to el

to know that I had the opportunity to
have a head start on my western pursuit,
grabbed the 7 day break across the
country. With I would already see
my father, sister and I settled
in the horse country of Sonoma, California.
The choice of this specific city is due
to the reputable school district to
continue my studies in an enriching
environment.

Adapting to the superhighly paced world of
collegiate life was difficult at first but
not too hard to cope with. It balanced
a necessary social life with my studies
and home life, while attempting to categorize the
thought patterns of myself and others.

Physics class affect my understanding
of how the universe functions.

Job 1:6-22

The lord was tempted by Satan to
prove that his followers job is true.

The lord ~~dreamed~~ to desire

Rewards are how people learn

The lord will give back twice
as much as given.

Emphasizes on the reward as
the reason for acting in an
enlightened way. Rather than

being consistent in either acting
good or acting bad by the letter
for noise of society. For will force
choice

- incorporate release and build up of
energy in audience.

- Build up = concepts
Release = laughter / class / etc.
- Repetition
- Consistency

God needs to have an showing
compassion more for issues surrounding
lies.

Desires

- Prove self-worth ex. Another person
(envy) is better at what
you do so you do
same reaction

Issues my source life has encountered

Boston 2010 June June - July

Balance - need to have a balance in
everything. There is always
another, equally impacting
piece that is crucial to
consider and adept with

Commitment - need to stay consistent
with thoughts, actions, beliefs,
and word.

2010 Michigan

Compassion - ("shared suffering") still
working on but consider another
perspective. What they are
suffering from. What is impacting
their thoughts, actions, beliefs and
word.

We all are living so we should
have equal respect for each other

The times are a changing

We learn by rewards.

Suffering - emphasizes the rewards that we always have

- the times are changing to prevent from thinking one way of thinking, acting believing "correct"

Balance

- Don't be too hard on yourself

remembered
Physics class inspire the ~~whole~~ foundation
my understanding of the way life exists
relationships between people and the interactions between objects

Physics shaped new on world

fall in love, with ~~whole~~ math because found relevance in extrapolation and steps of scientific method

realizing love would be a struggle against my neurological pathways

combines my ways of thinking and neurons and attributes to an occupation that matches my

- potential
- energy level (high hopes)
- goals

Work to restore and ground

- independence
- reason for knowledge
- role of the experience of life
- what of philosophy?

Start a philosophy club at school

Find the key fields of study that pursue the essence behind and trace back to what the mystery involves, i.e. There will always

- be whole through cause for many reasons
- be whole who started, ego or other, one
- can claim if there is no any ambiguity in the result, the original description needs to be redefined
- etc.

some main Christian topics / claims

Job: 38-41

The basic flaw in attempting to ignore the implications of your god desire is that one would not be embracing the life of a human. We have these random questions and logic so speaking like in a stand to someone desire and fear is not living as a human

Christianity has a strong emotional appeal but is logical itself. They embrace desire, love and desire of fear

The reason why it can draw to a God is because the source of a force outside of our dimensions has the ability to understand far greater than what God can be "achieved" in a human lifetime

but as there are many humans, unless your universe is under the ownership of one being, there are many influencing sources of impacting forces outside of our universe

Relative is a key to understand

I believe it would rather live by, that our concept of "one god" is more harmonious and would not purposefully have a role in our way to say lives

The implication of forces is a whole entity

The key to literature is true statements, describe and think about all of the truths/pure logics that involve the topic. Aristotle cover some of the core concepts in his 4 causes

- Material Cause
- Total Cycle (all parts involved, etc.)
- Purpose
- Final Cause

Good thing: tested and tested

Physics helps to motivate math

The thought patterns of experience during the topic of physics helped to rekindle my interests in the topic of math. I have always been significantly excited in our country's mathematical system. ~~When I was in middle school~~ ^{When I was in middle school} teachers found it ~~very~~ ^{hard} to apply the ~~algorithmic~~ ^{algorithmic} to realistic situations I could relate to, it lost interest in the struggle of Math Class. ~~My passion for physics class helped~~ ^{My passion for physics class helped} ~~border my passion for the measurability~~ ^{border my passion for the measurability} & all occurrences, because ~~my~~ ^{my} ~~extrapolation~~ ^{extrapolation} is a key step in the ~~scientific~~ ^{scientific} method

I took a step back from my enjoyment of the mathematical side of life and realized my dream of becoming a lawyer, or following in the footsteps of my grandfathers, not ~~becoming a lawyer~~ ^{becoming a lawyer} ~~biologist~~ ^{biologist} ~~neurologist~~ ^{neurologist} ~~mathematician~~ ^{mathematician} ~~in theory~~ ^{in theory} left hemisphere of my brain are much more dense than those in ~~math~~ ^{math} the right hemisphere. ~~of course~~

With brand, present I know that
my left handed dominance prevents my
hand to ~~present~~ present a hand ~~to~~ naturally
non-dominant the ~~other~~ ~~hand~~ ~~to~~ ~~write~~ naturally
the ~~reason~~ ~~why~~ ~~I~~ ~~do~~ ~~not~~ ~~enjoy~~ ~~the~~ ~~writing~~
the ~~majority~~ ~~of~~ ~~parents~~ ~~and~~ ~~know~~ ~~that~~ ~~hand~~
the school would ~~not~~ fulfill the aspirations
father and not ~~fulfill~~ my dreams.
Therefore, I combined with my passion for mathematics
and ~~physics~~ ~~my~~ ~~own~~ ~~interest~~ ~~to~~ understand
the ~~source~~ ~~of~~ ~~thought~~ ~~patterns~~ ~~and~~ ~~visions~~. (which
is one example before his statement)

Humans get to experience emotions

We all have life and that is beautiful ~~to~~ ~~have~~ ~~a~~

I feel very blessed to have been given wisdom

I believe by logic being taught to me at
young age

To be faced to decisions based off of desire and fear

Try and appreciate all the little
things.

Overthink ~~the~~ when appropriate
~~with~~ ~~the~~ ~~at~~ ~~hand~~
~~to~~

→ in the pursuit towards a career
in Neuroscience.

The ~~the~~ brain is uncharted territory
that is just waiting to be explored.

I was lucky enough to ~~be~~ ~~able~~ ~~to~~ ~~do~~ ~~that~~ ~~and~~
~~experience~~ ~~it~~ ~~in~~ ~~my~~ ~~interest~~ ~~with~~ ~~me~~ ~~under~~
unimagined ~~depths~~. ~~My~~ ~~quest~~ ~~allowed~~ ~~me~~ ~~to~~
reside in her house ~~and~~ ~~enjoy~~ ~~the~~ ~~world~~ ~~while~~
I experienced the life of a ~~professional~~. The
entire experience reshaped my ~~entire~~ ~~mind~~
thinking patterns. ~~I~~ ~~going~~ ~~to~~ ~~able~~ ~~to~~ ~~do~~ ~~it~~
bought of the day revealed the necessity to have
self-discipline. ~~One~~ ~~of~~ ~~the~~ ~~ways~~ ~~to~~ ~~improve~~ ~~yourself~~
is ~~to~~ ~~practice~~ ~~it~~. One of the most effective ways
of ~~improving~~ ~~yourself~~ ~~is~~ ~~to~~ ~~practice~~ ~~it~~ ~~yourself~~

thoughts and actions onto that which will
produce the best outcome... ~~the~~ ~~best~~
~~that~~ I'll be want to support myself increased
I want to support others. How
it supposed to ~~produce~~ effect generations
come if I am ~~wholly~~ reliant on the
